Hydroxyethyl Starch A Current Overview

Hydroxyethyl starch (HES) is the most common red blood cell sedimentation agent used to purify neutrophil collections for granulocyte transfusions. HES is a volume expander that carries a black box warning for increased risk of mortality and renal failure in critically ill patients, including patients with sepsis, and has been associated with increased bleeding risk.

Hydroxyethyl Starch - an overview | ScienceDirect Topics

Hydroxyethyl starch (HES/HAES), sold under the brand name Voluven among others, is a nonionic starch derivative, used as a volume expander in intravenous therapy. The use of HES on critically ill patients is associated with an increased risk of death and kidney problems. HES is a general term and can be sub-classified according to average molecular weight, molar substitution, concentration, C2 ...
