Meteorology is the study of the atmosphere. Meteorologists use science and math to understand and predict weather and climate. They also study how the atmospheric and weather conditions affect the earth and its human inhabitants.

How to Become a Meteorologist | EnvironmentalScience.org

Meteorology is a branch of the atmospheric sciences which includes atmospheric chemistry and atmospheric physics, with a major focus on weather forecasting. The study of meteorology dates back millennia, though significant progress in meteorology did not occur until the 18th century. The 19th century saw modest progress in the field after weather observation networks were formed across broad ...

Meteorology - Wikipedia

Meteorology is the study of the atmosphere, atmospheric phenomena, and atmospheric effects on our weather. The atmosphere is the gaseous layer of the physical environment that surrounds a planet. Earth's atmosphere is roughly 100 to 125 kilometers (65-75 miles) thick. Gravity keeps the atmosphere from expanding much farther. Meteorology is a subdiscipline of the atmospheric sciences, a term ...
