Phakic Iols State Of The

Phakic IOLs: State of the Art is designed to provide the advances in phakic IOL technology and techniques, ideal for physicians who treat many of the patients who are not candidates for laser vision correction. The collaboration of Dr. Lucio Buratto, Dr. Stephen G. Slade, and Dr. Nicola D. Hauranieh, along with a team of international surgeons, has produced a complete book specifically aimed to improve the treatment and therefore the quality of vision of patients.

Phakic implants, also called Implantable contact lenses (ICLs), are specially made intraocular lenses that are designed to be surgically inserted into the eye and remain there throughout your lifetime. They function much like contact lenses to correct one's vision; the main difference is that the phakic implant permanently stays inside the ...

Phakic Implant | Implantable Contact Lenses Seattle

Phakic intraocular lenses (IOLs) are a type of synthetic lens that are implantable in your eye, used to correct moderate or severe myopia. With more people in the U.S. being diagnosed with nearsightedness, phakic IOLs are a good option to treat those who may not be candidates for other refractive surgeries, like LASIK.

What Is Phakic Intraocular Lens (IOL) Surgery? A Patient's ...

Phakic IOLs are more readily available and have a longer history outside of the United States, which may partly account for their greater popularity in Europe. However, European surgeons have differing perspectives on their current level of use. "Phakic IOLs are being used more and more, at least in my environment," says Dr. Alio.

What Happened to the Promise of Phakic IOLs?

Phakic IOLs (intraocular lenses) are surgically implanted lenses used for the permanent correction of common vision errors such as myopia (short-sightedness). These implants, which resemble contact lenses, are placed either between the cornea (the clear lens in front of the eye) and the iris (the coloured part of the eye),

Phakic Intraocular Lenses | FDA

Phakic intraocular lenses (IOLs) are like a contact lens that can be implanted into your eye, so they permanently correct your vision. While not as popular as laser-based surgeries like LASIK, phakic IOLs are another option for correcting severe myopia, or nearsightedness, with or without astigmatism.
