Throughput definition — AccountingTools

Throughput accounting (TA) is an alternative to cost accounting proposed by Eliyahu M. Goldratt. It is not based on Standard Costing or Activity Based Costing (ABC). Throughput Accounting is not costing and it does not allocate costs to products and services. It can be viewed as business intelligence for profit maximization.

Throughput Accounting - Management Accountant

Throughput accounting ratio (TPAR) = Return per factory hour/cost per factory hour. In any organisation, you would expect the throughput accounting ratio to be greater than 1. This means that the rate at which the organisation is generating cash from sales of this product is greater than the rate at which it is incurring costs.
